

Biface #03 (water)

As illustrated in *Supplementary Figures 3.0* and *3.1*, at least 14 sites on biface #03 have retained biological matter after the decontamination procedure. This supports the inference that the *water* treatment cannot adequately decontaminate a bifacial tool which has been utilised for butchery tasks.

Supplementary Figure 3.0: The digital map of biface #03, showing face A (top) and face B (bottom). Red dots mark biological matter sites. Arrow points to the example image for either face. (Source: Whitehead).

Supplementary Figure 3.1: Photographic example of biological matter on either face of biface #03. Scale on the bottom right-hand corners. (Source: Whitehead).
